

## Extreme Flooding

# Bangladesh floods 2007

From July to September 2007 Bangladesh experienced extreme rainfall from two periods of extensive monsoon flooding.

The floods inundated 46 of the country's 64 districts, affecting 15 million people and damaging crops on tens of thousands of acres of land.

Over 150 people were killed and seven million were left homeless.

How well do you think people in Bangladesh are able to prepare for and rebuild after a large flood event?
